Preface	1
Conventions, notations and units	4
1 Klein–Gordon and Dirac equations: brief history	6
2 Physical contents of Dirac equation: preliminary discussion	12
3 Covariant form of Dirac equation. Fun with γ-matrices	17
4 Relativistic covariance of Dirac equation	23
5 C, P and T	30
6 Plane-wave solutions of Dirac equation: u and v	38
7 Description of spin states of Dirac particle	43
8 Helicity and chirality	50
9 Weyl equation	57
10 Wave packets. Zitterbewegung	63
11 Klein paradox	72
12 Relativistic equation for spin-1 particle	78
13 Splendors and miseries of relativistic quantum mechanics	84
14 Interlude: Lagrangian formalism for classical fields	88
15 Conservation laws from symmetries	95
16 Canonical quantization of real scalar field	105
17 Particle interpretation of quantized field	111
18 Complex scalar field. Antiparticles	116
19 Quantization of Dirac field. Anticommutators	121

20	Quantization of massive vector field	126
21	Interactions of classical and quantum fields	131
22	Examples of S-matrix elements. Some simple Feynman diagrams	137
23	Decay rates and cross sections	143
24	Sample lowest-order calculations for physical processes	151
25	Scattering in external Coulomb field. Mott formula	159
26	Propagator of scalar field	163
27	Propagator of Dirac field	170
28	Propagator of massive vector field	174
29	Fate of non-covariant term in vector boson propagator	177
30	Some applications: QED with massive photon	181
31	Quantization of electromagnetic field: covariant and non-covariant	186
32	Gupta–Bleuler method	194
33	Compton scattering: Klein–Nishina formula	200
34	S-matrix and Wick’s theorems: an overview	207
35	S-matrix and Wick’s theorems: some applications	211
36	S-matrix in fourth order: QED example	216
37	One-loop QED diagrams in momentum space	221
38	Regularization of UV divergences	226
39	Accomplishing dimensional regularization of $\Pi_{\mu\nu}(q)$	232
40	Pauli–Villars regularization	237
41	$\Sigma(p)$ and all that	244
42	More about QED loops	250
43	Fate of higher fermionic loops	255
44	Index of UV divergence of 1PI diagram	261
45	Renormalization in QED: preliminary considerations	267
46	Renormalization counterterms	272

47 Renormalization and radiative corrections	278
48 One-loop vacuum polarization in detail	285
49 Calculable quantities: UV finite without counterterms	293
50 Schwinger correction	297
A Basic properties of Lorentz transformations	305
B Representations of Lorentz group	309
C Review of “diracology”	313
D More about spin states of Dirac field	319
E Photon propagator in a general covariant gauge	322
F Electromagnetic form factors of electron	325
Bibliography	327
Index	330
